General Information

Focus Loop is an image processing platform capable of GPU-based object detection, tracking and recognition, enabling ease of use on other edge devices.

Our Focus Loop software is easy to configure, install and modify. It does not require programming skills or machine learning. Our Focus Loop software platform consists of unique and easy to modify modules for video analytics projects in different industries. Thanks to its user-friendly interface, you can configure the application settings and connect to the device as you wish without an internet connection.

Technical Specifications

Language Support	Tr, Eng
Communication Type	UDP, USB Serial Communication
License	Commerce
Operating System	Linux
Platform	Embedded
Version	V1.5.0
Software Language	Python
length	235mm
Width	110mm
Height	75mm
